TACHOMETRY ANNOUNCES CCP HOMEROOM™ 2.1
THE ADVANCED CLASSROOM COLLABORATION PORTAL

WALNUT CREEK, Calif., (February 25, 2005) - Tachometry Corporation announces a major new release of the innovative CCP HomeRoom collaboration portal, connecting teachers with students and their parents over the Internet.

This release introduces significant new functionality suggested by the teachers, parents, and administrators who have come to depend upon CCP HomeRoom. "We partner with real educators in an ongoing dialog that has given us vital insight into the need for better communication and collaboration in the education process," says Tom Evans, President of Tachometry. "Our mission is to create web-based software that will tackle thorny, real-world challenges, yet still provide a comfortable online experience and ease of use."

The Classroom Collaboration Platform from Tachometry fills an important niche in our secondary schools. "Parental involvement is so critical in shaping a successful education, but as kids move into junior high and high school, parents' visibility into the classroom tends to drop off," says Evans. CCP HomeRoom gives teachers an online forum for managing lesson plans, homework assignments, and student/parent relationships with minimal technical expertise. Complex technology concerns such as data integration and information security are handled capably and quietly in the background behind a deceptively simple user interface.

Jeff Greco, teacher and EETT technology coach at Central Junior High School in Pittsburg, CA agrees, "Tachometry has worked very closely with us to deliver a product that does exactly what it sets out to do: making it easy for faculty and staff at all levels to take advantage of the Internet to communicate with students and their parents."

With advanced word processing features and support for multiple languages, CCP HomeRoom meets the demands of today's multicultural community - extending the classroom to more students and parents than ever before.
