**TACHOMETRY LAUNCHES THE OPEN VELOCITY SUITE™**

WALNUT CREEK, Calif., (July 10, 2005) – Tachometry Corporation, a leading open source systems integrator, officially announced today the launch of the OpenVelocity Suite™, an innovative, powerful application suite that provides the open source software that businesses need to collaborate and share critical business information.

“We are really excited about the impact OpenVelocity will have in the SME marketplace,” said Nik Chanda, Vice President of Professional Services. “Businesses are looking for a proven enterprise-quality open source software solution that combines scalability with reliability. OpenVelocity Suite delivers that and more with a proven platform that is designed to grow as their needs change.”

The feature-rich OpenVelocity Suite is an all-in-one hosted solution that combines a secure web application portal with an integrated suite of rich client applications for the desktop. “We believe customers should only pay for the features they need,” says Chanda. “That’s why we offer OpenVelocity Suite with sensible cafeteria-style subscription pricing. Because our certified OpenVelocity service is hosted in a high-availability Tier 1 datacenter, it also includes maintenance and scheduled server, software, and network updates at no extra charge.”

OpenVelocity provides SME users with the ability to collaborate and share critical business information, including documents, email, calendar or conference information with speed and efficiency, in a secure environment—and from any computer anywhere in the world. SME’s can consolidate and simplify their IT infrastructure with an integrated solution that combines Internet, extranet and intranet features in one convenient package. As companies grow, they can easily add or create new custom applications without having to compromise on a consistent and friendly user interface.

---

“Small and medium-sized enterprises have been locked out of the high technology marketplace for too long,” says Chanda. “With OpenVelocity they now have the opportunity to compete on a level playing field, leveraging the power of open source software to realize the business functionality they need and at a fraction of the cost of traditional product development.”

Tachometry will be showcasing the OpenVelocity Suite at the LinuxWorld Expo in San Francisco at the Moscone Center from August 9<sup>th</sup> through August 11<sup>th</sup>, 2005.

### About Tachometry
